

Beef performance recording

BIAŁOGRZBIETA BREED JOINS SIMMENTALS AND RED POLISH COWS IN 2019.

Beef performance recording – the same as in the case of milk recording – applies to all cows in the herd. The condition for changing the type of recording from milk to beef is total change of the purpose use and keeping cows only as suckler cows rearing their calves. In 2018, this type of evaluation was offered only for Simmental and Red Polish cattle. At the beginning of 2019, this opportunity has been prepared for biało-grzbieta breeders. The condition to take advantage of this option is to have a herd of cows of at least 50% of the Simmental breed or 50% of the Red Polish (including unlimited participation of European red breeds excluding the Norwegian Red and Swedish Red breeds) or 50% of the biało-grzbieta breed.

The beef recording is carried-out in „C” method, where the activities – as specified in the methodology – are performed jointly by the breeder and the authorized PFHBiPM’s representative. As a result of the service a breeder who is in beef recording receives comprehensive data on reproduction performance, the muscle strength evaluation and the daily weight gain rate standardised till 210 days of age. The results of beef recording are ultimately recorded in the SYMLEK database, and made available to breeders in the form of periodic reports and forms, as well as published in the PFHBiPM national and regional publications and on our website.

Beef recording results, by breeds and voivodeships

VOIVODESHIP	NUMER				AVERAGE		
	cows	calves	barns	herds	birth weight	Weight standardised on 210 days	Daily gain till 210 days
